

AI-Powered Actionable Chat Agent

Delivery and Operations Team

Kone Quest- Commercializing Breakthrough Innovation ideas

30 September 2026

Dedicated to
People Flow™

AI-Powered Actionable Chat Agent: Making equipment and project tracking simpler, proactive and actionable.

Concept: An AI-powered conversational experience that helps customers understand project/equipment status, upcoming milestones, actions required and statuses across all their equipment.

The Problem

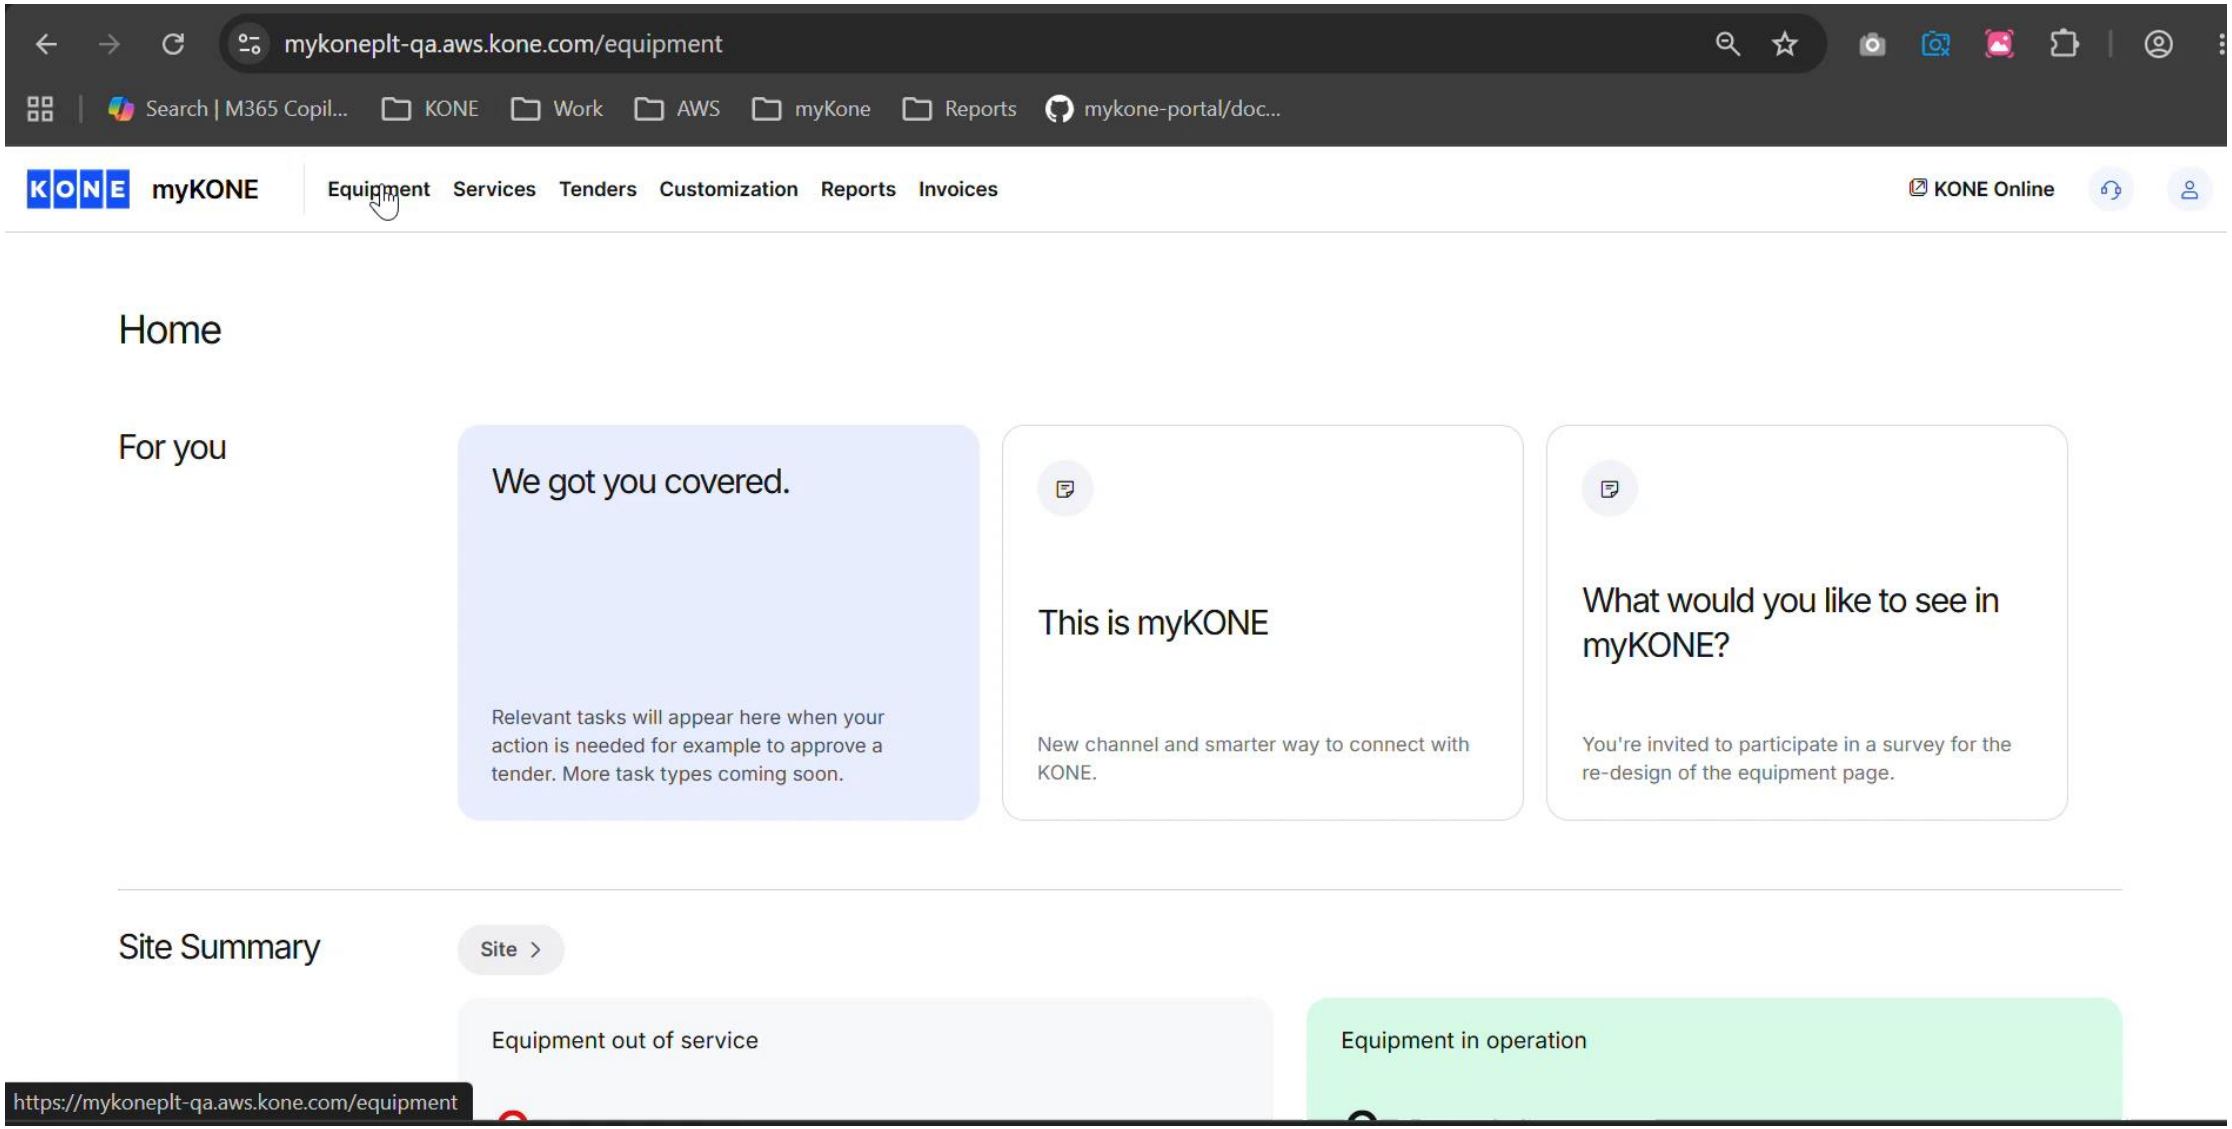

Customers have information, but getting the right information requires effort

Today, customers:

- Navigate between multiple Sales Orders / Opportunities
- Use myKONE to track equipment delivery progress
- Navigate through multiple screens to understand project status
- Read lengthy milestone descriptions to determine what is happening
- Switch between projects when managing multiple equipment
- Once the equipment moves from delivery to service phase customer need to use a new flow altogether which is different from the delivery flow

The challenge:

- Important customer actions can be missed, potentially blocking the next milestone and delaying the project.

For you
We got you covered.
Relevant tasks will appear here when your action is needed for example to approve a tender. More task types coming soon.
This is myKONE
New channel and smarter way to connect with KONE.
What would you like to see in myKONE?
You're invited to participate in a survey for the re-design of the equipment page.

Proposed Solution

AI-Powered Actionable Chat Agent

One conversational entry point for all project information

- Instead of navigating through multiple screens, the customer simply asks the agent what they need to know.
- The agent provides:
  - **STATUS** Where is my elevator?
  - **NEXT** What happens next?
  - **ACTION** What do I need to do?
  - **IMPACT** What happens if I don't complete it?

The goal

- Move from simply providing project information to providing actionable project guidance.

Core Capabilities

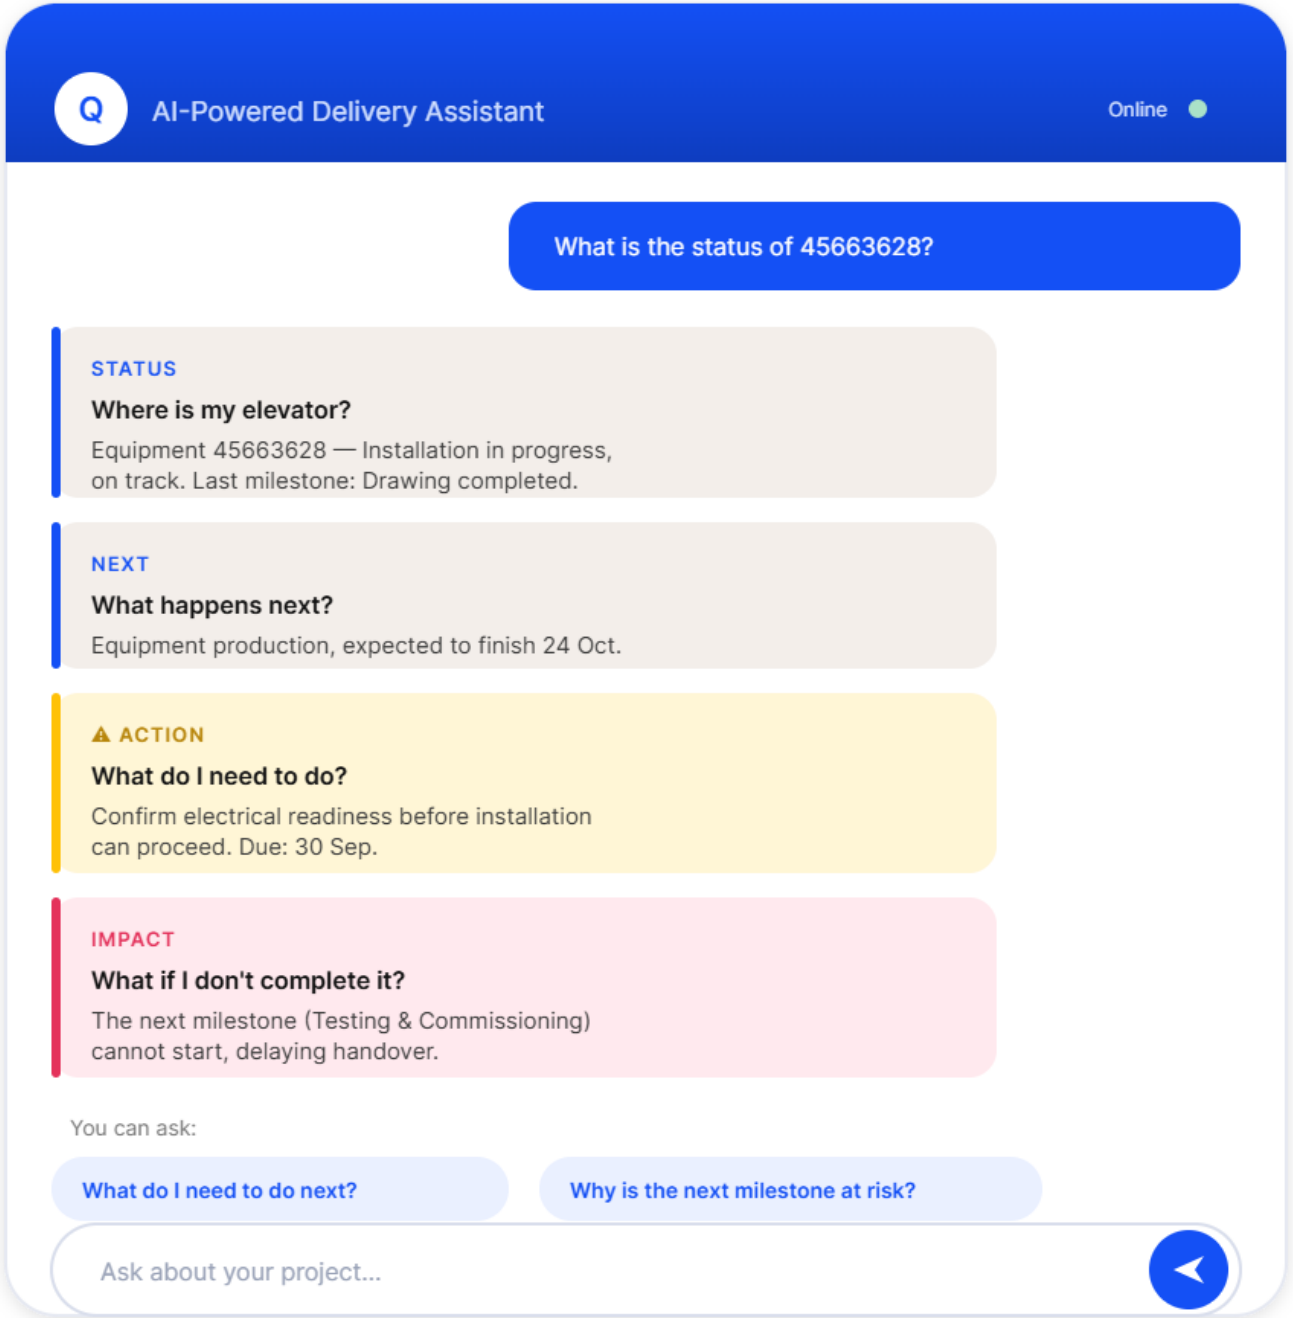

Instant Milestone Status

- Customer enters an equipment number and receives:
  - Last completed milestone
  - Current milestone / activity
  - Next upcoming milestone
  - Expected dates
  - Known blockers or dependencies

Example

Equipment 4123456

- Completed: Drawing completed - 24 Sep
- In Progress: Equipment production - 10 Oct
- Next: Installation – Expected - 8 Nov
- Status: On Track

Q
AI-Powered Delivery Assistant
Online
What is the status of 45663628?
STATUS
Where is my elevator?
Equipment 45663628 — Installation in progress, on track. Last milestone: Drawing completed.
NEXT
What happens next?
Equipment production, expected to finish 24 Oct.
⚠ ACTION
What do I need to do?
Confirm electrical readiness before installation can proceed. Due: 30 Sep.
IMPACT
What if I don't complete it?
The next milestone (Testing & Commissioning) cannot start, delaying handover.
You can ask:
What do I need to do next?
Why is the next milestone at risk?
Ask about your project...

Core Capabilities

Customer Action Assistant

- The agent identifies actions that the customer needs to complete before the next milestone can start.

Example

Equipment 4123456

⚠ Action Required
- Electrical readiness confirmation is pending.

⚠ Required before
- Installation → Testing & Commissioning

⚠ Due:
- 30 Sep

⚠ Impact
- The next milestone cannot be initiated until this action is completed

Q AI-Powered Delivery Assistant Online

What do I need to do for 4123456?

One action needs your attention before the next milestone can start:

Equipment 4123456

⚠ Action Required

Electrical readiness confirmation is pending.

Required before

Installation → Testing & Commissioning

Due

30 Sep

Impact

The next milestone cannot be initiated until this action is completed.

You can ask:

How do I confirm electrical readiness?

What happens if I miss the due date?

Ask about your project...

Multi-Equipment Support

One view across all customer projects

- Instead of navigating between Sales Orders / Opportunities, the customer can simply ask:

  “Show me my elevator projects.”

  You have 4 active elevators across 2 projects.

Equipment	Current Stage	Status
4123456	Drawings	On Track
4123457	Equipment Production	On Track
4123458	Installation	Action Required
4123459	Final Inspection	In Progress

Q AI-Powered Delivery Assistant Online

Show me my elevator projects.

You have 4 active elevators across 2 projects.

Equipment	Current Stage	Status
4123456	Drawings	On Track
4123457	Equipment Production	On Track
4123458	Installation	Delayed
4123459	Final Inspection	In Progress

You can ask:

Which projects need my action?

Why is equipment 4123458 delayed?

Ask about your projects...

From a Delivery Assistant to a myKONE Platform Assistant

The same conversational agent extends across the portal

- Customers ask once, and the agent pulls from every relevant microapp instead of one.
  - One entry point, all myKONE — status, next steps, actions, and impact spanning Tendering, Delivery, Service, Invoices, and Reports
  - No app-switching — the customer stays in one conversation instead of navigating between separate microapps
  - Cross-app context — the agent connects related information (e.g. an equipment issue that links to an invoice and a service request)

Expanded Scope by Microapp

The same conversational agent extends across the portal

- **Equipment** - "How is elevator 45663628 performing?" → live status, open faults, maintenance history, upcoming visits
- **Service / PSR (Planned Service Requests)** — "When is my next service visit?" / "Raise a callout for equipment X" → schedules, request status, one-tap actions
- **Invoices** - "Do I have any unpaid invoices?" → outstanding balance, due dates, download, dispute an item
- **Reports** - "Summarize last quarter's equipment downtime" → pulls the report and gives a plain-language summary

Why will this scale across platform?

- **Reusable pattern -** the STATUS → NEXT → ACTION → IMPACT model already built for Delivery applies to every domain
- **Consistent experience -** same chat UI, same brand, same interaction model across all microapps
- **Incremental rollout -** add one microapp at a time; each new integration compounds the agent's value
- **Single source of truth -** answers stay consistent because the agent reads the same data the microapps display

From Information to Action

The experience shifts from passive tracking to proactive project management.

- **Today:**
  - **Customer searches**
    - Navigates screens
    - Reads milestones
    - Interprets status
    - Identifies required action
    - Contacts KONE if unclear

- **With AI Assistant:**
  - **Customer asks**
    - AI understands the project
    - Summarizes status
    - Identifies next milestone
    - Highlights required action
    - Enables the customer to act

Key Message: Don't just tell the customer where the project is. Tell them what happens next and what they need to do to keep it moving.
