

myKone
Smart Assist

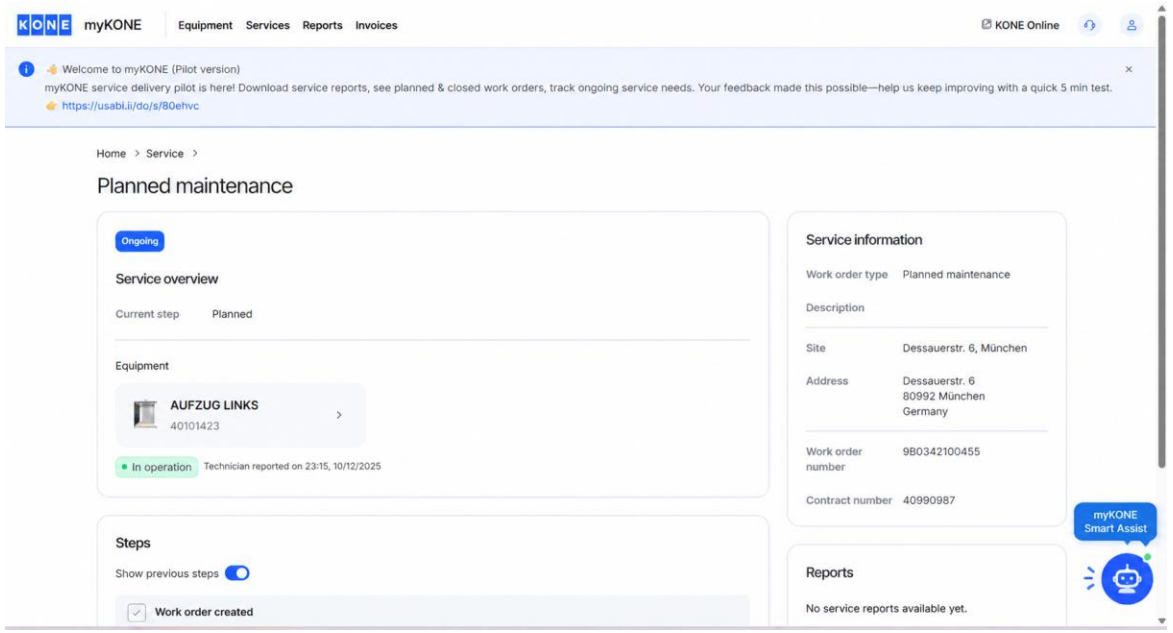

Problem Statement

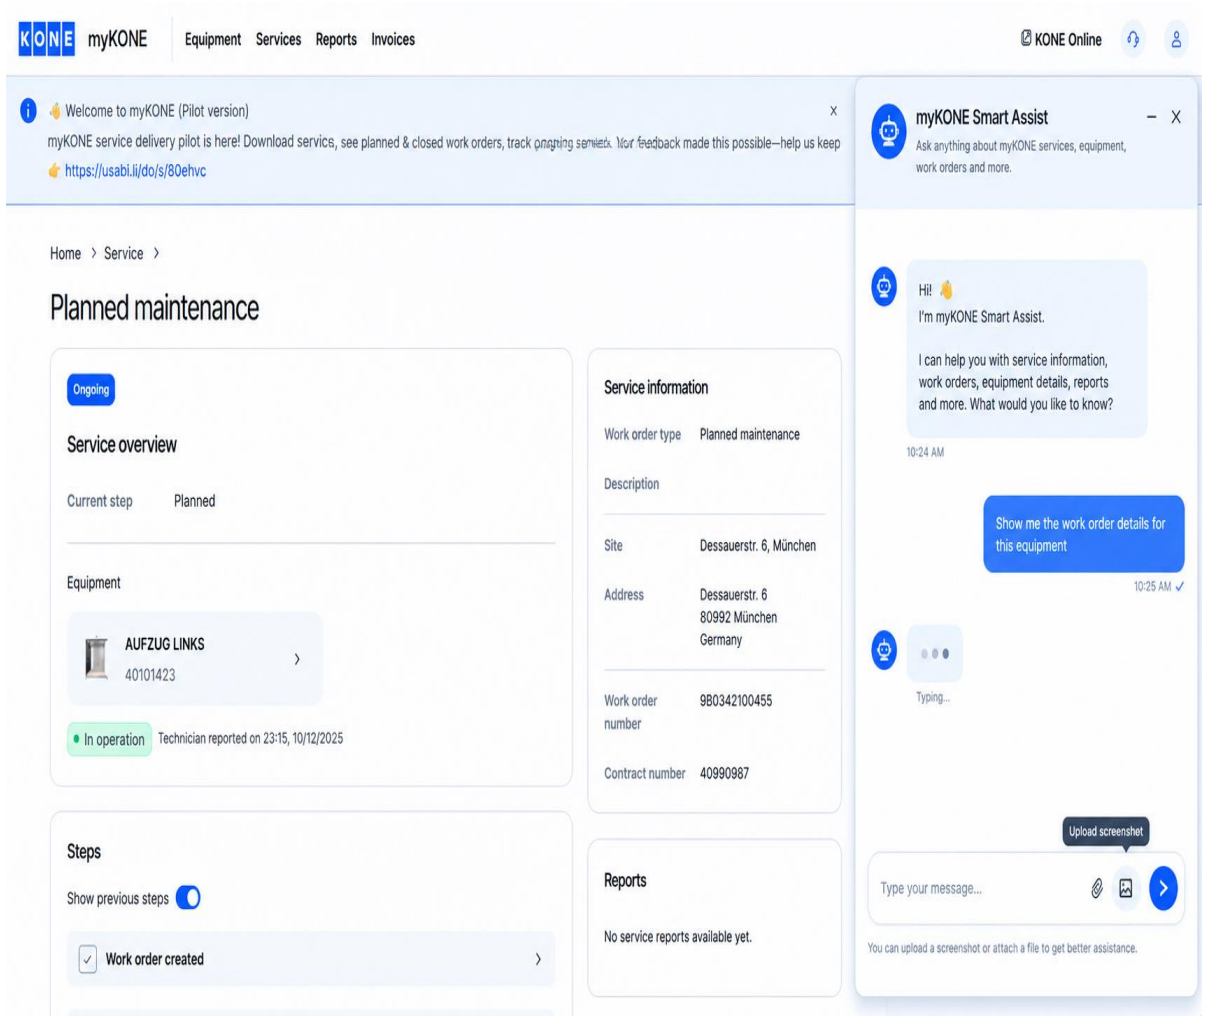

- Customers may not always know what information is available in myKONE, where to find it, or how to use the different features of the portal. When they have a question about their equipment, service, work order, or report, they may not know the right place to look or what action to take.

Idea

- The user can access the assistant anytime through the **floating Smart Assist icon**, without leaving the current page.
- The overall goal is to make myKONE more self-service, conversational, and easier to use—helping customers find the right information without having to navigate through multiple pages or contact support for every question.”

Our USP

- 📸 **Screenshot-Based Assistance** – Users can upload screenshots of issues or errors, allowing the chatbot to understand the exact problem they are facing.
- 🎯 **Controlled & Trusted Dataset** – Responses are generated only from an approved and curated knowledge dataset, reducing inaccurate or irrelevant answers.
- 🤖 **AI Powered by Amazon Bedrock** – Uses Amazon Web Services Bedrock to leverage enterprise-grade GenAI capabilities.
- 🔐 **Controlled Enterprise Responses** – The chatbot is designed to provide answers within the defined myKONE knowledge boundary rather than generating unrestricted responses.
- 💡 **Context-Aware Support** – Combines the user's question with the uploaded screenshot and trusted knowledge to provide more relevant guidance.

Impact

Period	Users / Queries	Time Saved per Query*	Total Time Saved
1 Day	10 queries	10 min	100 min (~1.7 hrs)
1 Week	50 queries	10 min	500 min (~8.3 hrs)
1 Month	200 queries	10 min	2,000 min (~33 hrs)
